

Clinic	Question	If Yes
Allergy Adult Clinic	The allergy clinic has a very limited capacity to see patients, and the majority of consultative questions will be handled through written exchanges. Clinic appointments will be prioritized for patients that have severe allergic disease in which testing is available and will make a difference in management. We offer skin testing for environmental allergies only (NOT food or medication allergies). Does your patient fall into the priority group as outlined above?	Please proceed with your referral.

If No**New Referral Type**

The majority of referrals will be handled through written exchanges. Please submit a referral with the understanding that your patient may not be scheduled for an appointment. The specialist reviewer will respond with information to guide the care of your patient.
